

MathFactLab™

Dear Families,

This year, in class, students are using **MathFactLab** to practice and learn the basic math facts (for example, $7 + 5$, $14 - 9$, 6×8 , or $32 \div 4$). What we particularly like about this program is that problems are represented visually and students are given strategies to solve them.

Regular practice at home with MathFactLab will lead to improved math fact fluency and greater overall success in math.

A few basics of the program:

- ◇ Students progress through a series of levels, learning a new group of related math facts at each level.
- ◇ The program automatically logs students off at the end of their session. Session lengths are set by the teacher and range from 5 to 20 minutes.
- ◇ MathFactLab works on desktops, laptops, Chromebooks, iPads and other tablets. It is **not** optimized for smartphones.

Use these login credentials to help your student access MathFactLab at home.
